Ability to set a default e-mail name, of each account Under Review

Kenneth •

Feature Request# **اسم المنتدى:** •

Currently, when requesting a new password, there is no name sent with the e-mail header, so the e-mail name appears in modern clients as "test@domain.dk", which is not pretty. A feature like setting a default e-mail name, for each account (overwritten by triggers etc.), would make it more flexible. Suggestion: Add the default name setting, to the e-mail account .setup/properties page
