## Ability to use the ticket-errors-overlay div in a custom built app Collecting Feedback

CM Christian Mattart •  
اسم المنتدى: # Feature Request

We have created an app which does two things in a particular scenario: hide the reply box and display a red warning to the agent.

.We'd like to be able to use the ticket-errors-overlay div that is shown when a ticket has no category instead

:We'd like it work something like this  
;scope.show\_error\_overlay = true\$  
;"scope.error\_overlay\_message = "bla bla\$
