.I would like to be able to use CASE in the SELECT statement for DPQL

.I want the channel to display differently, i.e. instead of gateway.person, it will display as "user email" instead

:Example

```
SELECT DPQL_COUNT(),
       CASE
         WHEN tickets.creation_system = 'gateway.agent' THEN 'agent email'
         WHEN tickets.creation_system = 'gateway.person' THEN 'user email'
         WHEN tickets.creation_system = 'web.agent.portal' THEN 'agent interface'
         WHEN tickets.creation_system = 'web.person.portal' THEN 'user via portal'
         ELSE 'Others'
       END AS 'Channel'
FROM tickets
WHERE tickets.date_created = ${date}
GROUP BY tickets.creation_system
```
