Feature Request# [اسم المنتدى](#) •

I'd like to manage the out of office messages coming from users when a ticket is already created (I did already manage the out-of-office coming from agents). The best way would be to make a note instead of a reply. The current way to do this is automatic and relies on the subject beginning with 'Automatic Reply:' or 'Out of Office:'
Can we configure the phrase corresponding to "out of office", knowing that in french, the text will be different

(I second that. German mailboxes tend to have different subjects than the standard ones ("Automatic Reply" etc
