?Can Deskpro send SMS text notifications

[Business Rules](#) - (0) [تعليقات](#) - Kimberley Wilson - 2023-09-15

You can automatically send SMS text messages to Agents using a Trigger, Escalation, or SLA. This is useful for alerting Agents to important events, such as high-priority tickets being created or an SLA failure. In order to do this you will need an account with the third-party SMS service Twilio

Go to the relevant menu for the automation you want to create, which will be in **Admin > Business Rules**

In this example, of a Trigger for the 1st Response SLA failing, you will need to set the Criteria that you want to be met for the SMS alert to be sent

3 Criteria

The criteria section is a list of terms that must match before the actions are applied to the Ticket.

When the following conditions are met:

Check ticket SLAs	contains	1st Response SLA
<input checked="" type="checkbox"/> Status is	Failed	
<input checked="" type="checkbox"/> SLA is complete (no longer running)		

Or when the following conditions are met:

Select...	Select...	
-----------	-----------	--

Then you will add the Action, **Send SMS with Twilio** and you will be prompted to enter your Twilio credentials

(Twilio Account SID (from **Account Settings** on the Twilio site) •

Twilio Auth Token (from **Account Settings** on the Twilio site) - click the padlock icon to reveal it

(From Number (must be a phone number registered with Twilio) •

4 Actions

These actions will apply when all of the criteria pass.

Then the following actions will run

Send SMS with Twilio

Twilio SID:*

Auth Token:*

From Number:* +44

In the Action, you can choose to send an SMS to individual Agents, Agent Teams, or Departments (i.e. all agents with full permission to access that .department), or to a specified number

To Agent(s):*

To Team(s):*

To Department(s):*

To Number:* +44

And it is obviously a lot more useful if the SMS message contains details of the specific ticket. So you can add the message that will be sent to the Agent. This uses the same variables as Snippets to automatically populate .ticket information into the message

Message:*

In this case, the message will provide the Ticket ID and Subject when the .message is sent

For an agent to receive SMS messages, you need to make sure there is a

mobile phone number saved for them in the Properties tab of their details
in **Admin > Agents**

Agents can also enter their mobile numbers through the Agent interface in
.Preferences > Profile

The screenshot shows the 'Properties' tab of an agent's profile. The tabs are: Properties (selected), Permission, Department, Notifications, and 2FA. The section is titled '1 Name & Contact Information'. It includes a 'Profile Image' section with a placeholder circle, 'Upload Image', and 'Delete' buttons. The 'Name*' field contains 'Luke Strauss'. There is a toggle for 'Display an alias to end-users' which is currently off. The 'Email Address*' field contains 'agent@example.co' and has '+ Add', a flag icon, and a trash icon. The 'Phone' field contains '+44 07739 991082' and has '+ Add' and a trash icon. A red arrow points to the phone number field.
