

Creating Deskpro Tickets using Google Calendar and Zapier

Using Deskpro - (·) Matthew Wray - 2019-10-17 - Comments

.You can integrate your Google Calendar with Deskpro using the third party [Zapier app](#)

.This will allow you to create tickets directly from Google events

You can use this integration to create tickets for new events and also existing and recurring events

.Create a Zapier account (1)

.You can create a Zapier account for free and you will get a fully functional 14 day trial

They operate a 'freemium' pricing model based on the complexity of the integrations you are using and the frequency you use them (you can read more about this on their [pricing page](#))

Open the 'Zap' editor (2)

Hit 'Make a Zap' in the top right corner of your home page (a 'Zap' is a term Zapier use to describe each integration you create)

Make a Zap!

.Once selected you will be taken to the Zap creation page

...It's structured along the lines of **When this happens... > Do this**

In this instance we would like an occurrence in Google Calendar to launch an action in Deskpro hence we will select google calendar as our first app

.Setup the Google Calendar integration (3)

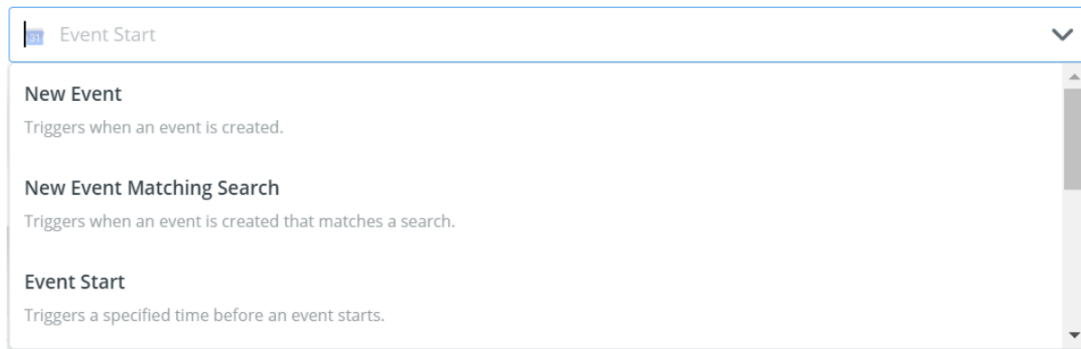

Once you've specified Google Calendar as the app you'll need to specify how this will instigate an action in Deskpro

a) Choose Trigger Event

There are three options here you can use to trigger a Deskpro action. New Event, New Event Matching Search (a new event that matches specific criteria) and Event Start (run

.(the action in Deskpro x amount of time before the event is due

Choose Trigger Event **(required)**

Event Start

New Event
Triggers when an event is created.

New Event Matching Search
Triggers when an event is created that matches a search.

Event Start
Triggers a specified time before an event starts.

In this example I will run through 'Event Start' as it is broadly the most useful as it allows you to create tickets x amount of time before an event begins . However the same .principles can be applied to the other two options

.b) Choose Account

Choose an existing account or add a new Google account. If you add a new account this will .launch a Window where you can enter your Google credentials for authorization

c) Customize Event

:You'll then need to specify when and where the zap should run

Customize Event

Calendar **(required)**

Time Before **(optional)** 1 2 3

How far before the event do you want us to trigger? For starter and free plans, this should be 16 minutes or more. For higher plans, 6 minutes or more.

Time Before **(Unit)** **(optional)**

Search Term **(optional)**

Triggers only on events containing the search term. **Note:** Search operators such as **AND** or **OR** do not work here. If you search for more than one word (e.g. **apple banana**) we will only find events with both **apple AND banana** in them, rather than events that contains ... more

 Refresh Fields

CONTINUE

.Specify the calendar under the account -

How long before the Google event you would like the action to run in Deskpro (the default -

.(is minutes but you can specify the unit if required

The search term allows us to restrict ticket creation based on words in the event. In this - .example I only want to create tickets for events with the words 'new' and 'starter' in them

d) Test and Continue

 When this happens ...
1. Ticket and task creation

✓ Choose App & Event

✓ Choose Account

✓ Customize Event

Find Data SKIP TEST

Click any of the buttons below, and we'll test your connection by going out to see if we can find an event in Google Calendar.

TEST & REVIEW

TEST & CONTINUE

Setup the Deskpro Integration (4

Once the test has been completed you'll be taken to the **Do this ...** element of the :integration. This is where you can select Deskpro

 **2. Do this ...**

Choose App & Event

Deskpro

a) Choose the Deskpro Event

.Again there are multiple Event options here

- Create Ticket •
- Create Organization •
- Create Person •
- Add message to Ticket •
- Update ticket •
- Find Person •

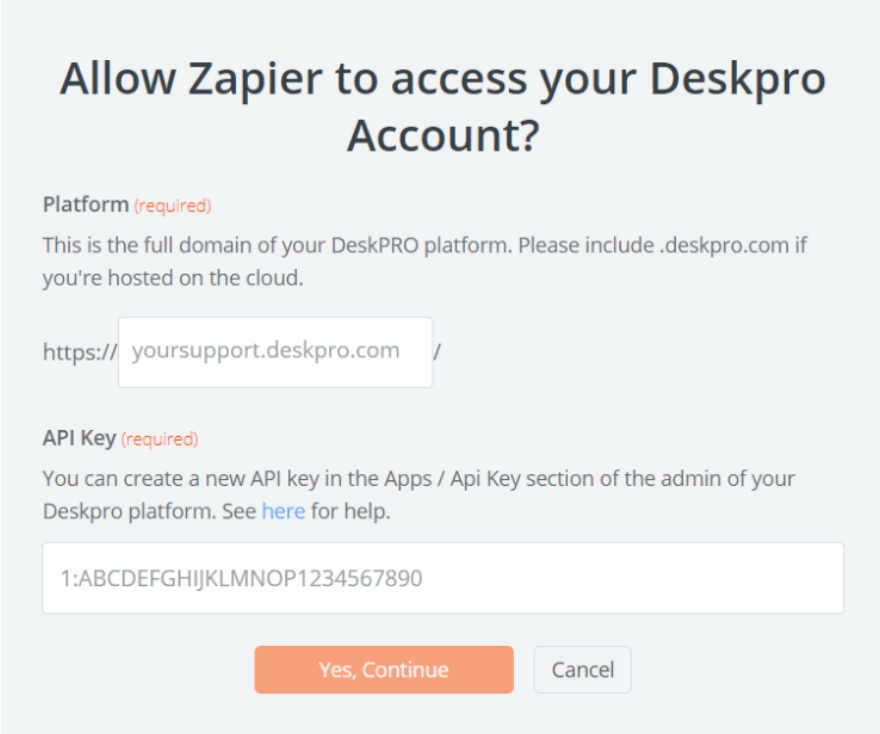

Find organization •

Find ticket •

For this example we'll use 'Create ticket', as we'd like to create a new ticket for our Google .Calendar Event

b) Choose Account

:Choose 'Add new account' and you'll then be taken to an authentication page

The screenshot shows a modal window titled "Allow Zapier to access your Deskpro Account?". It contains two main sections: "Platform (required)" and "API Key (required)".

Platform (required)
This is the full domain of your DeskPRO platform. Please include .deskpro.com if you're hosted on the cloud.
https:// /

API Key (required)
You can create a new API key in the Apps / Api Key section of the admin of your Deskpro platform. See [here](#) for help.

At the bottom, there are two buttons: "Yes, Continue" (orange) and "Cancel" (grey).

Specify your helpdesk URL and your api key (there's information on generating api keys [in our Guides](#) if needed)

c) Customize Ticket

:This is where we specify the criteria of the ticket we will create

Customize Ticket

Department (optional) 1 2 3

Agent (optional)

Agent assign to the ticket, you can use Id or email address.

Subject (required)

Message (optional)

Format (optional)

Message Author (optional)

 or

Can be an Id or email address.

Is Note (optional)

Create message as an agent note

Person (required)

Status (optional)

Labels (optional)

Comma separated list of labels

:This will create a ticket where

'Department is 'Support' •

Subject line is the event summary •

'Message contains 'Our new starter begins in two weeks' •

User on the ticket will be 'Matthew Wray' (Matthew Wray is the owner of the calendar •

.(and an existing user in Deskpro

d) Test and Continue

Send Data

[SKIP TEST](#)

Send Test Ticket to Deskpro

To test Deskpro, we need to create a new ticket. This is what will be created:

Format:	
Message Author:	
Is Note:	
Person:	Matthew Wray
Status:	
Labels:	
EMPTY FIELDS:	
Agent:	empty (optional)
Format:	empty (optional)
Message Author:	empty (optional)
Is Note:	empty (optional)
Status:	empty (optional)
Labels:	empty (optional)

TEST & REVIEW

TEST & CONTINUE

Again you'll have the option to test and continue. In this instance though when the test has been run successfully it will create a ticket in your helpdesk
