## Custom date field not working with format function

Ben Henley - 2023-08-01 - رويات - Ben Henley - 2023-08-01

## :Question

:I'm trying to create a report that includes information from a custom date field

'SELECT DATE FORMAT(tickets.custom data[1]), '%Y-%m-%d') AS 'Date

?However, the result table only displays None for that column. How can I fix this

## :Answer

Custom date fields contain integer timestamp values, so before you use the DATE\_FORMAT function, you first :have to convert to real dates using FROM\_UNIXTIME

 $\label{localization} \verb|'DATE_FORMAT(FROM_UNIXTIME(tickets.custom_data[1]), \ |'\$Y-\$m-\$d'|) \ AS \ |'Date = 1.5 \ |'Bate = 1.$
