

## How can I make agents record a solution for each ticket

Deskpro Legacy - تعليقات (0) - Ben Henley - 2023-08-31

### :Question

I would like to make my agents record how each ticket was resolved. Is there a way to add a compulsory 'Solution' field to Deskpro that is required to resolve a ticket

### :Answer

You can implement this easily using a custom ticket field

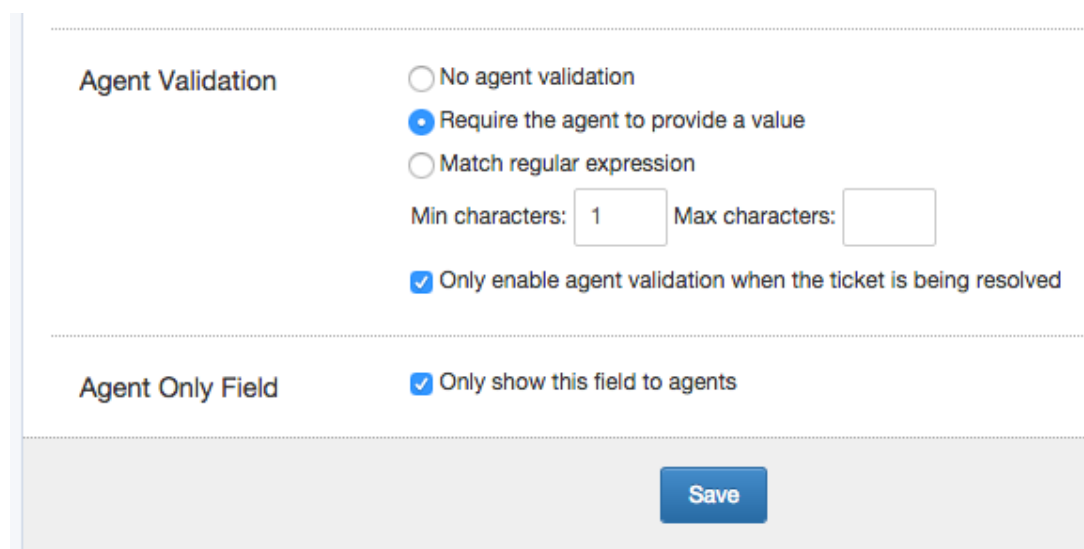

1. Go to **Admin > Tickets > Fields**

2. Click **Add**

3. Select a **Single-Line Text Box** or **Multi-Line Text Box** depending on how long a description you want agents to enter (or you could create a multiple-choice field using **Predefined Choices**)

4. Select **Require the agent to provide a value** and **Only agent validation when the ticket is being resolved**

5. You don't want users to see this field on the portal, so select **Only show this field to agents**

Agent Validation

☐ No agent validation

☒ Require the agent to provide a value

☐ Match regular expression

Min characters:  Max characters:

☒ Only enable agent validation when the ticket is being resolved

Agent Only Field

☒ Only show this field to agents

Save

6. Click **Save** and head to Tickets > Departments > Layout if you would like this to only appear on tickets for certain departments
