How do I create a custom button for my chat widget?

[Channels](#) - [\(0\) تعليقات](#) - Matthew Wray - 2023-09-20

If you want to use your own custom HTML element/button to launch the chat widget on a page, you just need to add the special classname `:"dpwidget-open"` to it. For example

```
<button class="dpwidget-open">Open Chat</button>
```

:You can use some custom CSS on your page to hide the default button

```
style type="text/css">>  
#dp_widget_container iframe[name="widget_trigger_iframe"] {  
    display: none !important;  
}  
<</style
```
