?How do I install the chat widget in Joomla

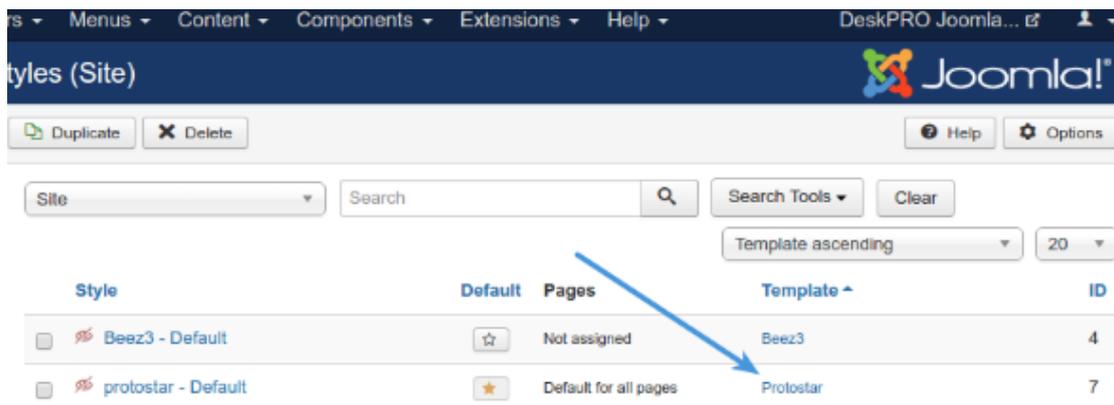

[Using Deskpro](#) - [تعليقات \(.\)](#) - Lauren Cumming - 2023-08-16

.Login to your Joomla account as an administrator .1

.Select "**Extensions**" > "**Templates**" > "**Styles**" from the dropdown menu at the top of the page .2

.Select your needed template e.g pick "**Default for all pages**" template, and click on its template name .3

.Copy the chat widget code from Deskpro under **Admin** > **Chat** > **Site Widget & Chat** .4

Add widget & chat to your site
Get instructions and help on how to add the widget to your website

Embed code

```
<!--DESKPRO_WIDGET_LOADER::BEGIN--><script type="text/javascript">window.DESKPRO_WID
```

COPY

Manually installing the widget

Install widget in a CMS

From your template select "**index.php**" from the file tree and find closing `</head>` tag. Paste the chat widget .5 .code here

The screenshot shows the Joomla! Templates: Customise interface. At the top, there's a header with the title "Templates: Customise" and several action buttons: "Save", "Save & Close", "Copy Template", "Template Preview", and "Manage Folders". Below the header, there are tabs for "Editor", "Create Overrides", and "Template Description". The main content area is titled "Editing file '/index.php' in template 'protostar'". On the left, a file tree shows the directory structure, with "index.php" selected. On the right, the code editor displays the HTML code for the file, with line numbers 128 to 147. A blue arrow points from the "index.php" file in the tree to the code editor. Another blue arrow points from the closing `</head>` tag in the code editor to the "index.php" file in the tree. The code in the editor includes a meta tag, a jdoc:include tag, and a body tag with various classes and attributes.

Press F10 to toggle Full Screen editing.

```
128     <meta name="view"
129     <jdoc:include ty
130     <!--[if lt IE 9]
131     </head>
132     <body class="site <?
133     . 'view-' . $vi
134     . ($layout ? 'l
135     . ($task ? 'tas
136     . ($itemid ? 'i
137     . ($params->get(
138     echo ($this->dir
139     ?>">
140     <!-- Body -->
141     <div class="body
142     <div class="
143     <!-- Hea
144     <header
145     <div
