How do I manually run the email processing ? command

[Sysadmin](#) - [تعليقات \(.\)](#) - Sangeetha Lakshminarayana - 2025-11-14

Sometimes you may want to manually run incoming email processing: for example, to debug connection problems

Email processing can be done from the command line using the below
:command

```
opc inst -i helpdesk php -- dpv5/bin/cron --verbose -f --job=process_email_gateways
```

.The --verbose flag tells Deskpro to output lots of debug output
