

## Report to generate Ticket Custom Field IDs

[Reports](#) - [تعليقات \(.\)](#) - Matthew Wray - 2023-08-24

It can be useful to have a list of ticket custom field IDs to hand when building reports, especially if you don't have admin permissions on your helpdesk

:You can generate a list of titles and IDs in the stat builder using the DPQL below

```
SELECT custom_def_ticket.title, custom_def_ticket.id  
FROM custom_def_ticket
```

.This will output all fields and IDs for the options available within them

: If you just want to output the top-level fields, you can add a **WHERE** clause as below

```
SELECT custom_def_ticket.title, custom_def_ticket.id  
FROM custom_def_ticket  
WHERE custom_def_ticket.parent.title = NULL
```

.You can build reports for other types of custom data fields as well

For example, you could create an equivalent report for user field IDs:

```
SELECT Custom_Def_People.title, custom_def_people.id  
FROM Custom_Def_people
```

.View our [Reporting Documentation](#) to see the other custom data tables you can reference
