

Setting User Contact Data

API - (.) تعليقات - Ashley Dawson - 2023-08-29

When creating users (agents or regular users) as well as organizations, you can set contact data in their profiles. For example, contact data may include their WhatsApp username, personal website URL, or address. When creating users (people) and organizations you can pass an additional "contact_data" property that allows you to attach one or more pieces of .contact information

Contact Data

Required Fields	Type	Contact Data Type
address (string) city (string) state (string) zip (string	address	Address
(url (string	website	Website
service: (choice: whatsapp, aim, msn, icq, skype, gtalk, other) (username (string	instant_message	(Instant Message (IM
username (string) (display_feed (boolean	twitter	Twitter
(url (string	linked_in	LinkedIn
(url (string	facebook	Facebook
(username (string	apple	Apple
(username (string	trust_pilot	Trust Pilot
username (string) (instagram_id (string	instagram	Instagram

Example Request

Below is an example request showing all contact data objects populated. Note that these are optional, so you can just add one of these objects if you like. each property of the . "contact_data" object is the "type" of the contact data object as shown in the table above
