Who gets my message when I reply to an email notification ?as an agent

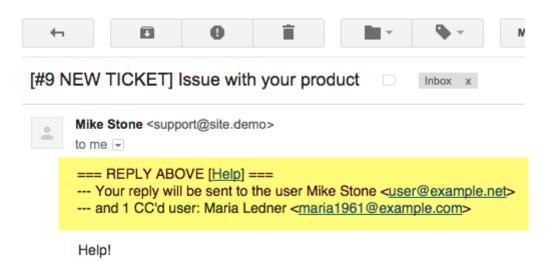

Deskpro Legacy - (۰) تعليقات - Christopher Nadeau - 2023-08-24

When you reply to a Deskpro notification in your email software, it's important to realise that you are *not* replying directly to the person who wrote the message. You are emailing .the *helpdesk*, which will process your message

Depending on your helpdesk's settings, your reply will be processed as *either* **a reply to** .**the user** *or* **an agent note** for other agents only

Every email notification makes clear at the top what will happen when you reply. We've .highlighted the text in the screenshots below for clarity

:This is the notification if the setting is **reply to the user**

If you reply to this email, your message will be sent to the user and any users CC'd onto the .ticket, as well as being added to the ticket message history

:This is the notification if the setting is to create **an agent note**

4		۵	0	0 î		9	•	
[#10 NEW TICKET] Problem with your service								
•	Mike Stone <support@site.demo> to me</support@site.demo>							
		EPLY ABC						
	Help!							

In this case, your reply will be added to the ticket as an agent note, visible only to agents on .your helpdesk

Choosing what happens with email action codes

You can choose what happens when you reply by email with by using an **email action** .code. This overrides the default helpdesk setting

.Put **#reply** at the very top of your email to make it a reply to the user

.Put **#note** at the very top of your email to make it an agent note

In this example, the helpdesk setting is to reply to the user, but the #note code tells .Deskpro to make a note instead

	#note
	I spoke to this customer on the phone and told him how to solve the problem. He said he will get back to us if it doesn't work.

There are many other action codes you can use when replying by email: see the <u>full list of</u>) .(<u>action codes</u>

Changing the email reply setting

If you are a helpdesk admin, you can change the default behaviour for when an agent .replies to a notification

In the admin interface, go to **Tickets > Settings**, and under the Email Settings section, .enable or disable **Process email replies as notes instead of ticket replies**

.Remember, this only affects what happens when an *agent* replies to an email notification

When you change the setting, it will only apply to future notifications. For example, suppose you switch the default from notes to replies: if an agent then replies to an old notification that says "Your reply will be added as a private agent note", their reply will still become a .note
