We are pleased to announce the release of **Deskpro version 2019.8.1**. This includes a handful of useful bug
fixes and general improvements

- CH-2655 The V1 API browser/explorer would throw an error, causing the endpoints to appear blank and disabling the sandboxes
- CH-2680 The 'real-time updates' feature when viewing tickets via an SLA filter would incorrectly reload back to the 1st page when disabled
- CH-3398 Certain incoming emails appeared to be stuck in the "PROCESSING" status, which interfered with the cron/scheduled task reliability
 - CH-3057 Certain SLA's circumstances leading to tickets not properly being actioned into the $$\operatorname{\text{warning/fail}}$$ state
