DeskPRO Build #5.5.7 Released

Release Announcements - (٠) تعليقات - Christopher Nadeau - 2017-05-08

This is a very minor update to address a regression where old reports might break when not using fully-qualified names (e.g. ticket.person instead of ticket.person.name).

This update also adds the ability to report on the "object_lang" table, which is used for translation data such as with snippets (for example, you could use this to count how many snippets are defined in each language).
