Deskpro Horizon Release 2024.10

Release Announcements - (٠) تعليقات - Lara Proud - 2024-03-06

We're pleased to announce the release of Deskpro Horizon, version 2024.10. This upgrade includes the ability to control searching archived tickets and specific IDs of helpdesk items, some permissions and security enhancements, in addition to several bug fixes. Keep reading for more details.

New Features

Enable searching for your archived tickets 🎫
Admins can now opt-in to enable search against archived tickets in the helpdesk, making archived tickets retrievable via Global and Ticket Search (SC 142474).

If you wish to make archived tickets available in search, go to **Admin > Ticket Structure > Statuses**. Select Archived, then in the menu, you need to enable the toggle **Search Archived Tickets**.

We've enhanced how ID matches are filtered for Global Search to ensure you're getting the most relevant results (SC 140789)

Now if you are only running a search against specific helpdesk items, such as Organizations, Tickets, Guides, and Tasks, only ID matches for those specific items will display at the top of the search app.

Latest Improvements

We've improved the security around agents updating their email addresses from their Agent Settings (SC 142060).

Now, when editing or adding email addresses, agents will be required to confirm their identity through password verification and email validation. This added layer of security helps protect against unauthorized changes to agent information.

When there is a Usergroup Permissions error, this will be displayed on the Permissions tab
.(to enhance clarity for Admins (SC 142133

Bug Fixes

Resolved a migration issue where linked chats wouldn't be created and linked to the ticket
.((SC 109661
