Easily filter your Community Topics with Lists

([Product \(Agent\)](#) - [تعليقات \(.\)](#) - Lara Proud - 2024-02-06)

Continuing with our updates on the way you manage and filter your information in the helpdesk, we are introducing the Lists feature to Community

This enhancement will help broaden Community capabilities by enabling agents to create custom no-code lists of your Community Topics. Agents will be able to form lists with the simple 'is/is not' filtering capabilities already available for Tickets and in the CRM

The screenshot displays a web interface for managing community topics. At the top, there's a search bar with the filter 'community_topic.id = 3'. Below it is a table with columns: ID, Title, Forum, Status, Votes, and an icon. The table lists 15 topics, each with a status indicator (Active, Closed, Done, Under Review, In Development) and a vote count. On the right side, there's a 'Filter' sidebar with a 'Clear' button. The sidebar has sections for 'Date / Time' (Date Created, Date Updated, Date Published) and 'Properties' (Title, Content, Author, Status). Below these is a filter configuration area with 'Is' and 'Is Not' tabs, a search input, and two options: 'Active' (checked) and 'Closed' (unchecked). At the bottom of the table, there's a pagination control showing 'Items per page: 100' and '1-12 of 12'.
