Snippet variables now support more custom fields

([Product \(Agent\)](#) - [تعليقات \(0\)](#) - Lara Proud - 2023-02-14)

.We've added support for more custom field types to be inserted as variables when using Snippets

So you can now create a Snippet with variables that will insert different field types. The following list details the different field types and the values that can be inserted

Single-line Text •

Multi-line Text •

Number •

Select •

Single-select ○

Multi-select ○

Toggle •

Date •

Date & Time •

Hidden •

URL •

Currency •

File •

To see what values will be inserted into the message when using the variable, see the [Snippet Variable](#) section of the Agent Guide.
