Count of tickets resolved by week of year and by ticket label Report

- Matthew Wray
- **Forum name:** #DPQL Reports

This report outputs a count of tickets resolved by week of the year and by label:

```
SELECT DPQL_COUNT()  
FROM tickets  
WHERE tickets.status IN ('resolved', 'archived') AND  
tickets.date_resolved = %THIS_YEAR%  
GROUP BY DPQL_MATRIX(tickets.labels.label,  
DPQL_ALIAS(DATE_FORMAT(tickets.date_RESOLVED, '%u'), 'Week resolved'))
```

Week resolved	None	danger	tasks	Total
02		2	1	3
03	1	1		2
04	2			2
05	7			7

We're using DPQL\_MATRIX here to allow us to split the data along two fields.
