How do I disable automatic error logging?

Christopher Padfield - 2017-11-10 - Comments (0) - Troubleshooting

In the unlikely event that Deskpro encounters a problem in its software; the error will be reported to the Deskpro servers to enable rapid diagnosis and resolution of any problem. To disable this reporting, please add the following line to the bottom of your config.php file.

```
$DP_CONFIG['debug']['no_report_errors'] = true;
```
