

"MISSING: /dev/bin" errors

Ben Henley - 2017-11-10 - Sylwadau (0) - Deskpro Legacy

Question:

Why do I get a series of errors like this during an installation?

MISSING: /dev/bin/cache-clear

MISSING: /dev/bin/console-api

MISSING: /dev/bin/console-dp

MISSING: /dev/bin/console-portal

Answer:

This false warning can happen due to a bug in a previous version of the Deskpro install wizard. It does not indicate a real problem, and you can safely skip to the next stage.
