Change the skin of the admin/agent interface Finished

- GD Grant Dyer
- **Navn på forum:** #Feature Request

I want to change the the skin of the admin/agent page. At least change the colour code to our own colour code. The colour blue that you are using is very close to the colour of a competitor of ours and though it's an internal tool only, we like to keep our branding consistent in front of our employees. Thanks

Hi Grant, You can change the CSS of the agent/admin interface by injecting some CSS into DeskPRO using an App (Admin -> Apps). It would take a web developer to help you do this (i.e. we don't have a feature to just change colors) but you can essentially change anything cosmetic this way.
