

## How to display a ticket custom field in an email template or Help Center template

Matthew Wray - 2023-08-31 - Kommentarer (0) - Admin

Ticket custom fields can be added to triggers, escalations, email templates, and Help Center templates. By adding a custom field item ID in a variable and including it in a trigger subject line or email template, it is possible to reference that custom field and populate the subject or template with the respective field.

### Custom fields in Trigger Action 'Set Subject':

In order to add custom fields to the subject of a ticket through the Trigger automation, you will need to:

1. Find the ID number of the field.
2. Replace the N in the following variable `{{render_ticket_custom_field(ticket, N, 'text')}} with the ID number of the field.`
3. Add the variable to the 'Set subject' Trigger Action. Depending on the type of trigger, this setting will prompt a change to the ticket subject line which will be populated by the custom field instead.

### Custom fields in Email templates:

In order to add custom fields to Email templates, you will need to:

1. Find the ID number of the field.
2. Replace the N in the following variable `{{render_ticket_custom_field(ticket, N, 'text')}} with the ID number of the field.`
3. Add the variable to the Email template and then Save.

### Custom fields in Help Center templates:

In order to add custom fields to Help Center templates, you will need to:

1. Find the ID number of the field.

2. Replace the N in the following variable `{{ticket.renderCustomFieldN | raw}}` with the ID number of the field.
3. Add the variable to the Help Center template.
