Allow agents to filter all the nested custom field options in the top-level select box Collecting Feedback

- TG Tyler Gelzaines
- **Forename:** #Feature Request

When we have a custom field option with one nested sub-option, both options appear in the same select box in the agent interface, so our agents can type to search for either selection:

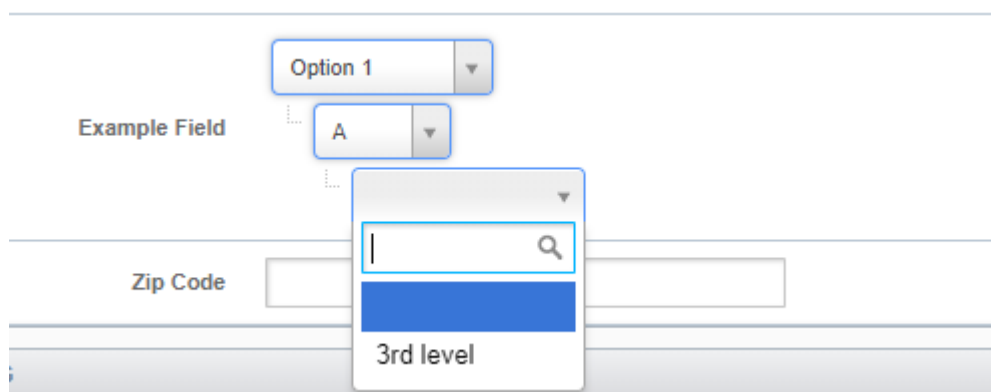

The screenshot shows a form with a field labeled "Example Field". A search filter is applied to this field, displaying a dropdown menu with the following options:

- Option 1
- A

The search bar is empty, and the dropdown is open, showing the search results.

When we add a 3rd nesting level, the options are moved into their own select boxes and we aren't able to quickly filter the results in the top level box. We have to go through and manually select each option.

The screenshot shows a form with a field labeled "Example Field". The field is now a nested select box. The first level of the dropdown menu is open, showing the following options:

- Option 1
- A

The second level of the dropdown menu is also open, showing the following options:

- 3rd level

The search bar is empty, and the dropdown is open, showing the search results.
