Option to add labels or paths to the quick search results in the portal to make it clearer what product/category an article relates to

- **Forenname:** #Feature Request

We'd like the option to add labels or paths to the quick search results displayed when completing the search box.

Our customer organises content by product. This means that articles have duplicate names. So in the quick search it is not possible to distinguish between the articles.

This could be resolved if we could display paths or labels.
