

## 5. Create triggers to automate processes

Benedict Sycamore - 2018-12-21 - Kommentare (0) - Getting Started

Deskpro customers often tell us that one of their all-time favourite features is Triggers, which automatically run predefined actions in response to ticket events.

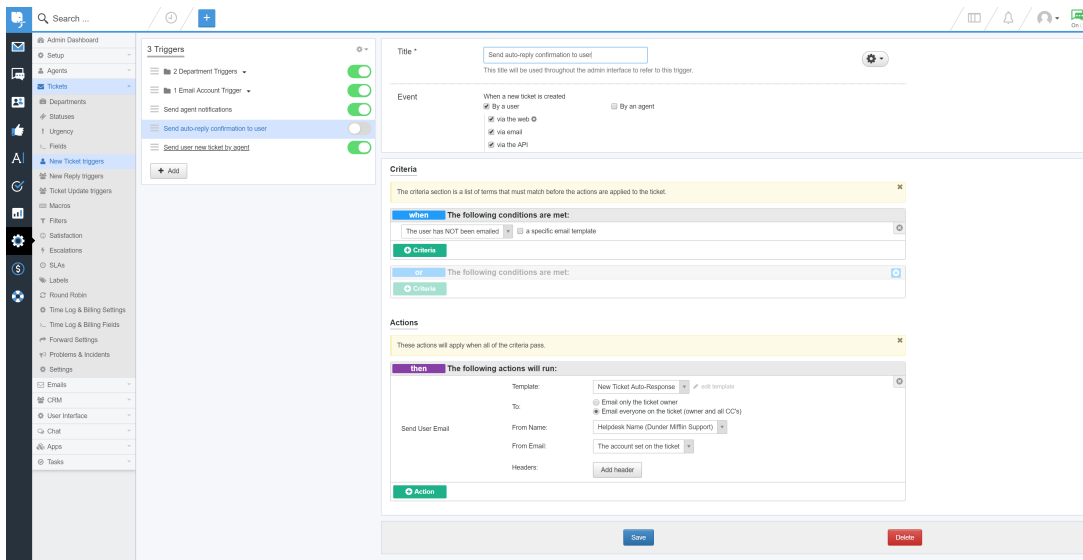

Triggers make setting up complex workflows a piece of cake, and enable you to automate routine and mundane tasks. This makes life easier for you, your teams, and your users.

There are a few built-in Triggers that control basic helpdesk functions. In fact, the mechanism you used to link email accounts to helpdesk Departments is a Trigger.

Triggers can run in response to a new ticket being created, a new reply to an existing ticket, or a when a ticket's properties change.

Trigger actions can include almost anything. For example, changing the properties of a ticket, or sending an auto-reply email to a user when they submit a new ticket.

In fact, let's try taking a look at that Trigger now so you can get a feel for how the feature works. Go to **Admin > Tickets > New Ticket Triggers**.

The screenshot displays the Deskpro Admin interface for configuring a trigger. On the left, a sidebar menu shows the navigation path: Admin Dashboard > Tickets > New Ticket Triggers. The main content area is titled '3 Triggers' and lists several triggers, with 'Send auto-reply confirmation to user' selected and highlighted in blue. The configuration panel for this trigger is shown on the right. It includes a title field with the text 'Send auto-reply confirmation to user', an event dropdown set to 'When a new ticket is created', and a criteria section with two conditions: 'The user has NOT been emailed' and 'The user has NOT been emailed' (with a note that a specific email template is used). The actions section is titled 'Send User Email' and includes fields for 'Template' (set to 'New Ticket Auto-Response'), 'To' (with options for 'Email only the ticket owner' and 'Email everyone on the ticket (owner and all CCs)'), 'From Name' (set to 'Helpdesk Name (Ouder Mftin: Support)'), and 'From Email' (set to 'The account set on the ticket'). There are 'Save' and 'Delete' buttons at the bottom of the configuration panel.

Click the Trigger titled **Send auto-reply confirmation to user**. You will be able to see the Events that will cause the Trigger to run, and additional Criteria that need to be met in order for it to run.

If the Criteria are met, the Event will cause the Trigger to run the defined Actions.

You can choose to enable this Trigger by clicking the grey button in the list of Triggers, or you can experiment and create your own.
