

I'm having trouble with my macro not adding text to a reply

Question

I want to create a macro which uses an **Add Ticket Reply** action to add text to a reply. I set it up like this:

Who can use this macro??

Everyone ↕

Actions

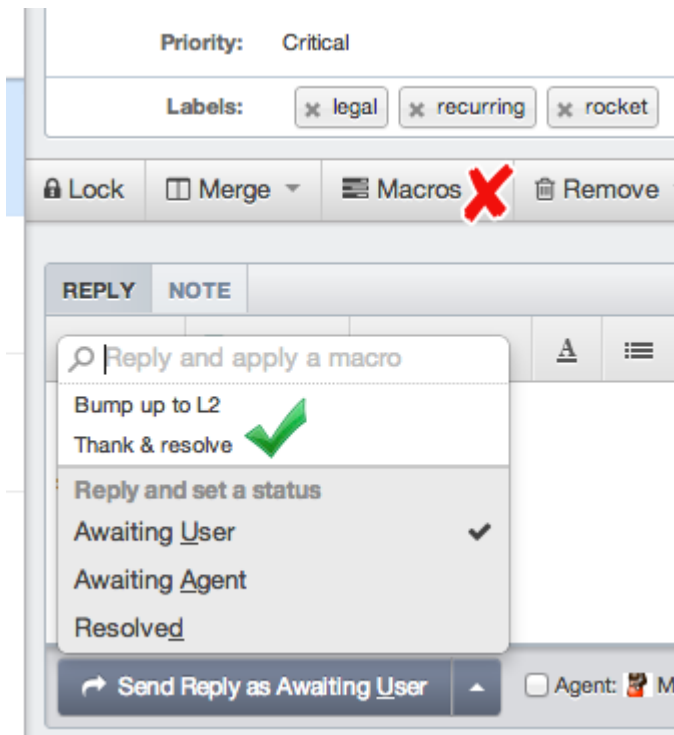

The screenshot shows a configuration window for the 'Add Ticket Reply' macro. On the left, there is a dropdown menu with 'Add Ticket Reply' selected. To the right, a text box contains the macro's content: 'Glad we could resolve your problem. Thanks Acme Corporation!'. Below the text box, a question asks 'When selected from the reply box, where should the text be inserted?'. A dropdown menu below this question is set to 'Append to existing reply text'.

When I run the macro, the text isn't added to the end of my reply as I expected. Instead, a reply is sent with just the text I wanted to append. What's going on?

Answer:

When using an **Add Ticket Reply** macro to append or prepend text, you should make sure to run the macro from the **Send Reply as** control, *not* from the **Macros** control.

If you run it from the **Macros** button on the ticket (or as a mass action), the actions will run in the context of the ticket as a whole, rather than the reply you're creating. As a result, the text is not added to the reply you are editing, but instead is sent as a separate reply.
