

Using the Deskpro API browser

Ben Henley - 2017-11-09 - Kommentare (0) - Deskpro API

You can browse the Deskpro API and try out the available operations using our API browser.

Go to **[yourhelpdesk/api/api.html](#)** to see the API browser.

See the [API browser section of the Developer Manual](#) for more details about using the browser.

Note: you need to [generate and enter an API key](#) if you want to be able to execute API operations.

Remember that any POST and DELETE operations will change the data in your helpdesk, so be careful what you do on a production helpdesk.

There are a few operations which aren't yet properly supported by the API browser (e.g. where you need to send an array). For full documentation, refer to the [API section of the Developer Manual](#).
