Deskpro Private Controller Release 2.27

2026-04-15 - Chris Robinson - [Kommentare \(0\)](#) - [DPC Releases](#)

This release upgrades the search functionality in the Deskpro Private Controller for better performance and reliability, alongside general stability improvements and a minor fix to settings updates.

2.27.0

New Features

- Upgrade search service for new installations of the DPC.

Bug Fixes

- Correct the CLI output when enabling and/or disabling telemetry.

2.27.1

New Features

- Update MySQL to 8.4 for new installations of the DPC.

Improvements

- Update Nginx in the DPC WebGUI to the latest version.
- Various security fixes and improvements.

2.27.2

Bug Fixes

- Fix first-boot secure provisioning for appliances.

2.27.3

Improvements

- Drop unrequired capabilities in DPC WebGUI containers.
- Update Laravel framework to v13 in DPC WebGUI.

2.27.4

Improvements

- Improve configuration options for external services to better support credentials and TLS configuration.
- Support Ubuntu 26 and Debian 13 installations.
- Various security fixes and improvements.

2.27.5

Improvements

- Support S3 problem checks using IAM role credentials.
- Update provisioning scripts to remove Ansible deprecation warnings.
- Various security fixes and improvements.

Bug Fixes

- Update headers in internal API client for information retrieval.

2.27.6

Improvements

- Various security fixes and improvements.
