Handle re-sizing Guide content better for different screen sizes Finished

- DT Dave Topan
- **Όνομα φόρουμ:** #Feature Request

On the Portal, the width of the Guides doesn't adjust depending on the screen size. This means that text is still shortened and less legible, even though there is space to be used.

The screenshot shows a Help Center interface. On the left is a sidebar menu with categories: IT Disaster Recovery, APPLICATION AND ROLE R... (highlighted), Applications, Roles, FILE RESTORE (Backup Exec, Azure Backup), POLICIES (Backup Policy, highlighted), and SYSTEM SPECIFIC RECOVER... (Priority 1 Systems). The main content area displays the 'Backup Policy' page, including its publication and update dates, a section titled 'I. Purpose and Scope', and a list of bullet points describing the policy's goals. On the right, a 'CONTENTS' table of contents is shown, with 'I. Purpose and Sco...' and 'II. Backup and Rec...' listed.

Thanks for this suggestion, it has been implemented on Help Center. When you adjust the screen while looking at a Guide, the content will now adjust to fit the width of the browser to ensure it can still be read. The table of contents on the left-hand side will be stacked above the guide content and collapsed into a menu so it can still be accessed easily if you need to jump somewhere else in the guide.
