Make missing required fields more obvious Collecting Feedback

- Drew
- **Όνομα φόρουμ:** #Feature Request

When required fields are missed on the ticket submission form and submission fails, have a more obvious failure message generated for the user at the top of the page. Alternatively re-position the screen over missed field(s).

The current message is:

"There are errors with the ticket fields that you must correct before replying."

which doesnt inform you which field has not been filled out.
