# Deskpro Private Controller Release 2.26

2025-11-27 - Chris Robinson - [Σχόλια (0)](#) - [DPC Releases](#)

This update enhances the reliability and control of your Deskpro Private environment by ensuring that all features for your license type are available and suitably protected.

## 2.26.0

### New Features

⬜ Access to restricted DPC features can now be granted based on instance licenses

### Latest Improvements

⬜ Require a unique reference instead of email address to start a remote support session.

### Bug Fixes

⬜ Fix failing MySQL install for Debian Bookworm builds.

⬜ Fix creation of instances if global Redis configuration is missing.

⬜ Update bundled docker compose version for installer.

## 2.26.1

### Bug Fixes

⬜ Check disk space on correct backup drive before performing backup.

⬜ Prevent errors being shown on storage page when using S3 adapter with legacy license.

⬜ Allocate a TTY correctly for new docker compose binaries.

## 2.26.2

### Latest Improvements

⬜ Updates to various application dependencies.

**Bug Fixes**

☐ Ensure php commands are executed without a TTY.

# 2.26.3

## Latest Improvements

☐ Update Redis on RHEL-based installations to use Redis 8.4.

☐ Update installed Elasticsearch version to 8.x for new installs.

# 2.26.4

## Latest Improvements

☐ Various security fixes and improvements.

# 2.26.5

## Latest Improvements

☐ Add installation support for RedHat Enterprise Linux 9.7 (and derivatives).
