

New Feature: More Powerful JIRA Integration

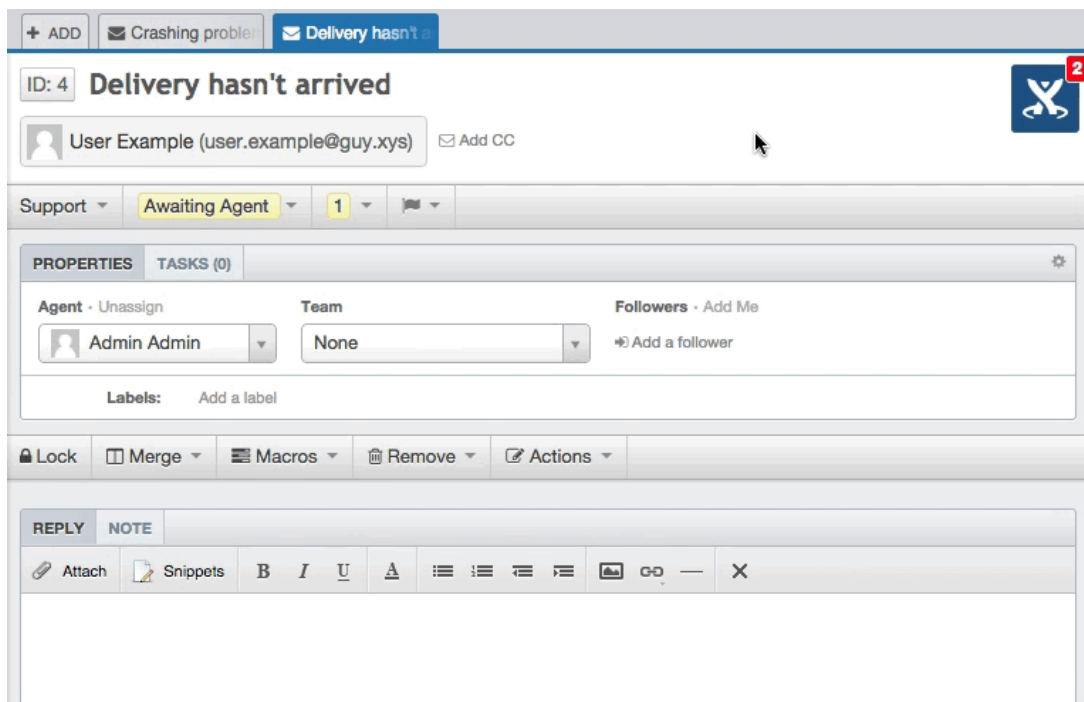

2014-12-08 - Ben Henley - Σχόλια (0) - Product

At DeskPRO, we know it's important that your helpdesk works with the rest of your software. That's why we offer a wide range of apps to integrate with third-party services.

[Atlassian JIRA](#) is a powerful issue tracking system. DeskPRO has had JIRA integration for a while, but now we've **completely overhauled our JIRA app** with more functions and a completely new interface style.

Now you have more options to link JIRA issues and DeskPRO tickets: link one ticket to multiple issues, or create a new issue based on a ticket.

JIRA information is displayed in a collapsible pane; you can open it only when you need it, or if you use JIRA integration a lot, keep it locked open all the time.

The screenshot displays the DeskPRO interface for a ticket. At the top, there are navigation tabs: '+ ADD', 'Crashing problem', and 'Delivery hasn't arrived'. Below this, the ticket ID is '4' and the title is 'Delivery hasn't arrived'. The user 'User Example (user.example@guy.xys)' is associated with the ticket, and there is an 'Add CC' button. The ticket status is 'Support' and 'Awaiting Agent', with a count of '1'. The 'PROPERTIES' section includes fields for 'Agent' (Unassign, Admin Admin), 'Team' (None), and 'Followers' (Add Me, Add a follower). There is also a 'Labels' section with 'Add a label'. Below the properties, there are action buttons: 'Lock', 'Merge', 'Macros', 'Remove', and 'Actions'. The bottom section is a rich text editor for replies, with tabs for 'REPLY' and 'NOTE', and a toolbar with icons for 'Attach', 'Snippets', bold, italic, underline, link, list, and other formatting options.

The updated app enables you to:

- View details of a linked issue, including JIRA comments, from within DeskPRO.
- See linked DeskPRO tickets from within JIRA.

- Post comments to JIRA from DeskPRO.
- Open a linked issue in the JIRA interface with one click.
- Customize which JIRA fields are displayed in DeskPRO.

The image shows two side-by-side screenshots of software interfaces. On the left is the JIRA interface for a project named 'PROJ-7'. It displays a ticket titled '[Ticket #4] Crashing bug'. Below the title are buttons for 'Edit', 'Comment', 'Assign', 'More', 'Start Progress', 'Done', and 'Admin'. The 'Issue Links' section shows a link to 'DeskPRO #4 Crashing bug'. The 'Activity' section shows two comments: one from Mike Smith and one from a JIRA Link [Administrator], both mentioning a version 1.2 issue and a fix in version 1.3. On the right is the DeskPRO interface for the same issue. It shows 'Issue ID: PROJ-7', 'Summary: [Ticket #4] Crashing bug', 'Issue Type: Task', and 'Description: Mobile app crash on startup'. The 'Comments' section shows the same two comments as in JIRA, with a text input field and an 'Add Comment' button below.

You can also create DeskPRO triggers which respond to JIRA events:

The image shows a 'Criteria' configuration screen in DeskPRO. It features a 'when' section with the text 'The following conditions are met:'. Below this, there are two conditions: 'New Linked Issue' with a checked 'Project' dropdown set to 'Helpdesk', and 'Issue Status' with a dropdown set to 'Any', followed by 'Linked Issue status' with a dropdown set to 'is not' and another dropdown set to 'Closed'. At the bottom, there is a green button with a plus sign and the text 'Criteria'.

and add JIRA comments from your triggers, SLAs and escalations.

If you're currently using the old JIRA integration, don't worry: when you install the new app, all the links to JIRA that you've already created will continue to work.

See this Knowledgebase article for [more details about the JIRA app](#), including a full installation guide.
