Custom user fields that require unique data entires Finished

- Jeremy Budd
- **Forum name:** #Feature Request

Create a custom user field that must have a different value for each user. This field would require unique data, so that no user could have the same value as another user. <br /><br /> <br /><br /> In our context, we would use this for Local Machine ID, Virtual Machine ID, user name, and office location. I'm sure other DeskPro admins could find good uses for a field like this. It could be used as a rudimentary form of asset tracking, or even for something as simple as verifying unique identifiers.
