## Snippets Autocomplete! Collecting Feedback

- JC Jeremy Cunningham
- **Forum name:** #Feature Request

When referencing snippets with the % in a ticket, snippets with similar names appear (as shown in the screenshot). I would like you to be able to press tab to autocomplete the typed in reference AND if there are multiple matches to be able to highlight the one you want with the arrow keys and press enter to select it. This would be amazing!!!! I appreciate all you do, lets keep at it and continue making an amazing opensource product!!!!
