## How can I make agents record a solution for each ticket?

Chris Robinson - 2023-08-24 - Comments (0) - Admin

## Question:

I would like to make my agents record how each ticket was resolved. Is there a way to add a compulsory 'Solution' field to Deskpro that is required to resolve a ticket?

## Answer:

You can implement this easily using a custom ticket field.

- 1. Go to **Admin > Ticket Structure > Ticket Fields**.
- 2. Click New.
- 3. Select a **Single-Line Text Box** or **Multi-Line Text Box** depending on how long a description you want agents to enter (or you could create a multiple-choice field using **Select Field**).
- 4. You don't want users to see this field on the portal, so select **Agent only field**.
- 5. Select **Require the agent to provide a value** and **Only agent validation when the ticket is being resolved**.

Field type		
Single-line Text		
Title*

Enable agent validation who	en the ticket is being resolved	

**x** 

 Click Create and head to Admin > Ticket Structure > Departments if you would like this to only appear on tickets for certain departments.
