

How do I run a report showing ticket activity grouped by agent and department?

Benedict Sycamore - 2018-05-09 - Comments (0) - Using Deskpro

To create a log of all ticket activity within a given timeframe, grouped by both agent and department, you can generate the following report.

This report will reveal a list of departments, agents within them, tickets each agent has interacted with, and the time of those interactions.

To generate this report, input the following into the query builder when using the reports interface:

```
DISPLAY TABLE
```

```
SELECT tickets_logs.date_created
```

```
FROM tickets_logs
```

```
WHERE tickets_logs.person.is_agent = 1 AND tickets_logs.action_type IN ('ticket_created',  
'message_created', 'changed_agent', 'changed_agent_team') AND tickets_logs.date_created  
= %1:DATE_GROUP%
```

```
GROUP BY tickets_logs.person.primary_team AS 'Team', tickets_logs.person AS 'Agent',  
tickets_logs.ticket.id AS 'Ticket ID'
```

```
ORDER BY tickets_logs.person.name ASC
```

This set of queries will include the agent activity listed in the WHERE clause, like 'message_created' for example. If you'd like to expand or change the actions which are captured by the report, refer to our [DPQL Field Reference](#).
