How to display a ticket custom field in an email template or Help Center template

Matthew Wray - 2024-10-01 - Comments (0) - Admin

Ticket custom fields can be added to triggers, escalations, email templates, and Help Center templates. By adding a custom field item ID in a variable and including it in a trigger subject line or email template, it is possible to reference that custom field and populate the subject or template with the respective field.

Custom fields in Trigger Action 'Set Subject':

In order to add custom fields to the subject of a ticket through the Trigger automation, you will need to:

1. Find the ID number of the field.

2. Replace the N in the following variable with the ID number of the field.

3. Add the variable to the 'Set subject' Trigger Action. Depending on the type of trigger, this setting will prompt a change to the ticket subject line which will be populated by the custom field instead.

3 Criter	ria		
The criteria	section is a list of terms that m	ust match before the actions are applied to the Ticket.	
When	the following conditions are m	net:	Ξ.
	Department	✓ was set during this event	• • +
Or	when the following conditions	s are met:	
	Select	▼ Select ▼	
4 Actio	ns		
These actio	ns will apply when all of the crite	eria pass.	
Then	the following actions will run		
	Set subject	 (lticketfield)) 	i +
		☑ Use advanced formatting	

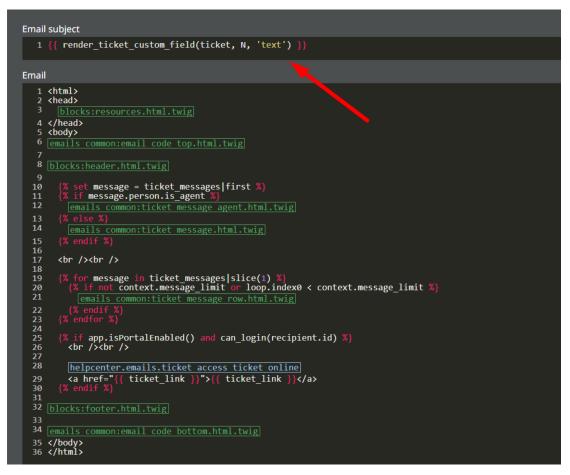

Custom fields in Email templates:

In order to add custom fields to Email templates, you will need to:

1. Find the ID number of the field.

```
2. Replace the N in the following variable {{
  render_ticket_custom_field(ticket, N, 'text') }} with the ID
  number of the field.
```

3. Add the variable to the Email template and then Save.

Note

For user custom fields this would be: {{ render_person_custom_field(ticket_person, N, 'text')
}}

Custom fields in Help Center templates:

In order to add custom fields to Help Center templates, you will need to:

1. Find the ID number of the field.

2. Replace the N in the following variable $\{ \{ ticket.renderCustomFieldN \mid raw \} \}$ with the ID number of the field.

3. Add the variable to the Help Center template.
