## JIRA integration app

David Pinto - 2023-09-12 - [Comments \(0\)](#) - [Admin](#)

The updated JIRA integration app enables agents to link Deskpro tickets with issues in [Jira](#).

### What the JIRA app does

With the app installed, agents can do these things from within Deskpro:

- Create a linked JIRA issue based on a ticket
- Link a ticket to one or more existing issues
- View linked issues from a collapsible JIRA pane at the right of each ticket
- Add comments to linked JIRA issues

JIRA users can see which Deskpro tickets are linked to a JIRA issue.

<b>Description</b>	Printer driver bug
<b>Issue Links</b>	linked with <a href="#">DeskPRO #3 Printer emits smoke</a>

With some additional configuration in JIRA, admins can:

- Create Ticket Update triggers that respond to changes to linked tickets within JIRA
- Create trigger criteria based on JIRA issues/comments
- Use an automation action to add JIRA comments in triggers/SLAs/escalations

### Installing the JIRA app

Go to **Admin > Apps & Integrations > Apps**. Under the **Available** tab, select Jira:

The screenshot shows the 'Apps' management interface in JIRA. At the top, there's a search bar and a tab for 'Available (30)' apps. A grid of 12 app cards is displayed, each with an icon, name, and a brief description. The 'JIRA' app card, located in the bottom row, second column, is highlighted with a red border. Other visible apps include Asana, Azure Devops, Bookmarks, ClickUp, Copper, Deskpro Feedback, GitHub, GitLab, IFrame, Jira Data Centre, and Latest News.

When you click on Jira, a menu will open, select the **Setup** tab, and follow the Guide to set up your Jira app.

## JIRA App Setup

To install the JIRA app you must first create an API key. Head over your JIRA cloud account, the URL will look something like [https://<my\\_company>.atlassian.net/](https://<my_company>.atlassian.net/).

Once you've logged in, navigate to the "Account Settings" section.

Next, go to the "Security" page. Here you'll find the "API Token" section.

Click on the link labelled "Create and manage API tokens"

[Keep your account safe with two-step verification. Learn more](#)

[Manage two-step verification](#)

### API token

A script or other process can use an API token to perform basic authentication with Jira Cloud applications or Confluence Cloud. You must use an API token if the Atlassian account you authenticate with has had two-step verification enabled. You should treat API tokens as securely as any other password. [Learn more](#)
