Deskpro 2022.1.0 Release

2022-03-09 - James Godwin - Comments (0) - Deskpro Releases

We are pleased to announce the release of **Deskpro version 2022.1.0**. This is a bugfix release.

Bug Fixes

- SC 63890 Move Google fonts loading to product and allow to disable it
- SC 64608 Add an existing user as a CC, then add a new user as a CC, receive an incorrect error message pop up
- SC 64116 Missing attachment source_ref's
- SC 61472 Help Center Theme switch from legacy portal to new help center theme not changing
- SC 56399 HELP CENTER Calendar pop up selection does not update field on user form
- SC-62064: 500 error in some cases when using the API to create new tickets.
- SC-62069: Temporary blobs being served after being abandoned. This could be abused to upload files that agents couldn't delete easily, but with permalinks that would still work. See this KB article for a fuller explanation and mitigations to handle pre-existing temp blobs.
