New Feature: Per-User and Per-Organization Fields

2014-11-06 - Ben Henley - [Comments \(0\)](#) - [Product](#)

DeskPRO already supports custom fields stored about your users. They work fine if you want to record information that can have the same range of values across all your users: their shoe size, or their birthday.

But what if you want a field that has different predefined values for *each* user?

Suppose you sell custom pet accessories, and you want to record which pet a ticket is about. The possible values for User A might be "Fido" and "Tigger", whereas those for User B could be "Shadow" and "Felix". A normal custom field won't work.

Now you can handle this sort of information with **per-user custom fields**. You can create a field that has different possible values for each user and edit them on the user profile.

The image shows two side-by-side user profile cards. The left card is for user #3, Adam Every, and the right card is for user #4, Eve Adamski. Both cards have a 'SUMMARY' section and a 'PROPERTIES' section. In the 'PROPERTIES' section, there is a 'Timezone' dropdown menu set to 'UTC'. Below it, there is a 'Pets' field. For Adam Every, the 'Pets' field shows a list with 'Fido' and 'Tigger'. For Eve Adamski, the 'Pets' field shows a list with 'Shadow' and 'Felix'. Each list has an 'Add' button and a text input field labeled 'Enter a title...'. The 'PROPERTIES' section also has 'Cancel' and 'Save' buttons.

When your users submit a ticket from the portal, they can select from their own, personalised values, or even update them.

And of course, we've added **per-organization fields** too. You could use them to record buildings in an organization, the server or domain a software problem relates to - whatever information you need to track with different values for each user organization you deal with.
