## A selection from a field to display another field Finished

- LP Lu Parente
- **Forum name:** #Feature Request

We are looking for the ability to select an option from a custom field which would drive the next field displayed in a form. Currently, the only fields that are supported are the built in fields of Category, Product and Priority. Can you please develop the ability to do this with any custom field.<br /><br /> <br /><br /> Example:<br /><br /> An option from a custom multi-select field is selected and once selected a subsequent custom field is displayed.<br /><br /> <br /><br /> Thank you,<br /><br /> <br /><br /> Lu.
