Better management of organizations and users Collecting Feedback

- RJ Ronnie Jorgensen
- **Forum name:** #Feature Request

We have 2000+ resellers in our ERP system which are forever changed by adding new, removing old customers or changed. I would really like better options for importing organizations with all the options like label and email domain from CSV files etc and also i would also like to do mass actions on organizations so for example you can add a label to all selected organizations.

It would be great to enhance the CRM app and improve the filtering and managing of users, including mass actions applied to the CRM (e.g. the mass deletion of organizations and users based on criteria such as creation date, domain etc.).
