

Creating and maintaining your Knowledgebase

Ben Henley - 2026-01-02 - [Comment \(1\)](#) - [Portal Customization](#)

Knowledge Base benefits

Maintaining a comprehensive and up-to-date **Knowledge Base** is a valuable investment that saves agents time and improves the support experience in several ways:

1. **Faster, more consistent responses:** Instead of writing a new explanation for each user, agents can share a link to a relevant KnowledgeBase article. This reduces response time and helps ensure answers are clear, accurate, and consistent. Sending a troubleshooting guide can also reduce the number of follow-up messages required to resolve an issue.
2. **Improved efficiency with AI tools:** You can configure your Knowledge Base as an AI data source, allowing Deskpro's [AI agent tools](#) and [chatbot](#) to use your content. This helps agents work more efficiently and enables users to find answers through automated assistance.
3. **Ticket deflection and self-service:** Users may find the information they need before submitting a ticket by searching the Knowledge Base or through Deskpro's ticket deflection feature, which suggests relevant articles based on the subject entered in the contact form.

Please complete this form and one of our agents will reply to you by email as soon as possible.

Starting a Knowledge Base

Starting a Knowledge Base from scratch can feel overwhelming, but it does not need to be. Instead of trying to design a complete category structure upfront, focus on creating your first 20 articles. Once those articles are in place, it becomes much easier to see how they naturally group into categories.

When creating categories, think from the user's perspective. Avoid using internal company structures or technical jargon that may be unfamiliar to users. Instead, organize content around the products you offer or the stages of the user journey, such as **Delivery**, **Setup**, **Troubleshooting**, or **Maintenance**.

Your existing tickets are one of the best sources for identifying new Knowledge Base articles. Using Deskpro's full-text search, you can quickly identify frequently recurring topics in past tickets.

The screenshot shows a search interface with the following details:

- Search:** The search bar contains the query "boiler".
- Preview:** The "Preview" button is selected.
- Filter:** The filter is set to "1/9" and "Sort: Best match".
- Tickets (33):** The search results show two tickets:
 - 666 Boiler is broken:** Created by Logan P <logan@test.com> 2 yrs ago. The ticket icon shows a user profile with the number 10.
 - 465 Boiler Visit:** Created by Agatha Bardle <agathabardle@example.com> 2 yrs ago. The ticket icon shows a gear and a checkmark.
- Full screen:** A "Full screen" button is visible in the top right corner.

When a ticket contains information that would be useful to others, you can turn it into an article using the **Pending Article** option in the ticket **More** menu. To speed up content creation, you can also use Deskpro's [Write article with AI](#) feature to generate a draft in seconds.

Not every ticket needs its own article. Focus on issues that occur frequently or are likely to recur over time. One effective approach is to train agents to apply a label such as **Recurring** to tickets that relate to common problems. You can then review these labelled tickets regularly to ensure each topic is covered by a Knowledge Base article.

Knowledge Base articles are also useful for addressing pre-sales questions, not just issues raised by existing customers. Speak with your sales team to identify common questions, misconceptions, or use cases that potential customers frequently raise, and consider documenting these in articles.

Search data can also help you identify gaps in your Knowledge Base. Review the search terms users enter when visiting your website and look for common queries that could be resolved with an article. It is also useful to monitor external forums, Q&A sites, user reviews, and social media to understand the issues users are discussing.

Finally, make sure your Knowledge Base is easy to find when users need help. Link to it from relevant pages on your website and include it in emails you send to users. Where appropriate, feature the Knowledge Base URL on delivery slips, instruction manuals, or other customer-facing materials.

Sharing the workload

Consider how responsibility for writing articles will be shared, while ensuring content remains consistent in presentation and style.

If multiple agents contribute to the Knowledge Base, it is important to standardise how articles are created. You can do this by using the [publish template system](#), which allows you to create a standard template that agents can base their articles on.

Improving the experience

As you create articles, you can use the following features to improve the user experience in the Help Center:

- Use the **Glossary** feature to define technical jargon or terms specific to your products or services. The first time a term appears in an article, it is underlined, and its definition is shown in a pop-up on hover.

- Link related articles together using the **Related Content** tab to help users find additional relevant information.

Maintaining your Knowledgebase

When your products or services change, make sure you have a process in place to update all relevant Knowledge Base articles.

It is also good practice to review content regularly. Deskpro allows you to set a review date on each article. Once this date is reached, the article appears in the **Requires Review** folder in the publish section of the agent interface, helping you keep content accurate and up to date.

The screenshot shows the Deskpro agent interface for managing articles. On the left, the sidebar includes sections for Content (Knowledge base, 221B Energy, 221B Internal Support, News, Files, Guides), Comments (Unpublished, All), Drafts (My Drafts, All Drafts, Pending Articles), and Publishing Workflows (Pending Approval, Auto Unpublished, Requires Review). A red arrow points to the 'Requires Review' section. In the main content area, the article 'How-to read my meter' is displayed in the 'How-to Articles' editor. The editor has a toolbar with File, Edit, View, Insert, Format, Tools, Table, Help, and a rich text editor. The article content discusses reading gas and electricity meters. A red arrow points to the 'Review Date' field, which is set to 'January 2026'. A calendar for January 2026 is shown, with the 2nd highlighted. The calendar includes instructions for reading meters and notes about review dates.

You can even automatically unpublish content when it reaches review date if you wish. This can be configured in Admin > Help Center > Knowledge Base > Settings

You can also use reports to find articles that have been rated poorly by users.

The query below will give you a list of your articles ordered by lowest rated to highest:

```
SELECT articles.title, articles.id, articles.total_rating
FROM articles
ORDER BY articles.total_rating ASC
```

To use this code:

1. Go to **Reports > Stats**

2. Click **Create Statistic**.

3. Add a title

4. Click on the RAW DPQL tab

5. Paste in the code

6. Hit save

This will render as below allowing you to easily identify poorly received articles.

Title	ID	Total Rating
Understanding Your Economy Meter	18	-1
How-to read my meter	1	0
How-to submit a Gas or Electricity meter	2	1
Moving homes? Follow these steps to make the move easier!	3	1

Reset order | Showing 1 to 4 of 4 entries

Test how users are likely to search for common problems and check that the most relevant articles appear near the top of search results. If they do not, add appropriate search keywords to the articles to improve their visibility.

Archive articles that relate to obsolete products or features. Archived articles remain available at the same URL for reference, but are no longer visible when users browse the Knowledge Base.

You can install the Deskpro [Google Analytics app](#) to identify your highest-traffic articles. Keep in mind that some visits may come from general web searches rather than existing users. However, high traffic can also indicate common issues or information that users need to refer to frequently. You can also search for an article's URL in your tickets to see how often agents share it with users.

If some articles receive little or no traffic, investigate why. Review your tickets to determine whether the issues covered no longer occur, the content is out of date, or the article is difficult to find. It is also worth checking whether agents are aware the article exists and know when to use it.

I'd be curious how the Review feature works in detail. How Publish and Unpublish work for admin staff. How messages for reminders are shared.
