I have been locked out of my helpdesk by IP whitelisting

Sangeetha Lakshminarayana - 2025-09-13 - [Comments \(0\)](#) - [Sysadmin](#)

Question:

I enabled IP whitelisting on my helpdesk. Something has gone wrong with sending outgoing email, so I can't receive the email to verify my IP address. How can I log in?

Answer:

In Deskpro On-Premise, you can disable IP whitelisting from the command line.

Navigate to the directory:

```
/opt/deskpro/data/instances/{helpdeskID}/services/deskpro/config/
```

and edit *deskpro-config.php* and add this line at the bottom:

```
$CONFIG['settings'] = array('agent.ip_security.enabled' => false);
```

That will disable the IP whitelisting check. Once you have fixed the problem with email, don't forget to delete or comment out the line.
