

Reports widget override examples

Matthew Wray - 2025-05-20 - [Comments \(0\)](#) - [Reports](#)

You can format charts in Reports V2 using JSON with our Widgets Override option.

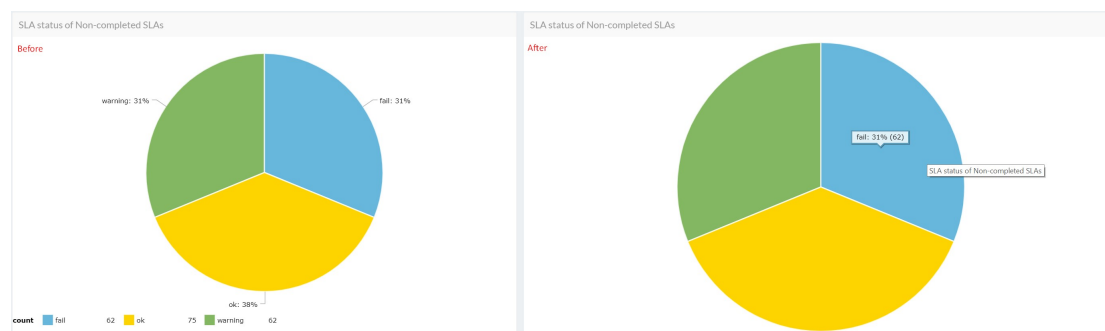

You can find the official documentation here: <https://docs.amcharts.com/3/javascriptcharts/AmChart> but we have included some examples below. You can see the differences in the pie chart after our custom JSON was added.

1) You can use the following format to change the font of the legend and labels of a pie chart:

2) Here we are removing the legend and labels from the pie chart:

Hovering your mouse over the chart allows the details to be displayed.

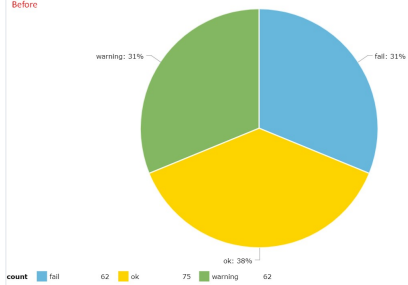

More information about standard AmCharts options can be found [here](#).

You may be particularly interested in AmBalloon, CategoryAxis, ValueAxes, AmGraph, AmLegend or AmBalloon.

3) In the following example, we have customized the colors of the SLA categories in the pie chart:

SLA status of Non-completed SLAs

Before

SLA status of Non-completed SLAs

After
