Setting User Contact Data

Ashley Dawson - 2023-08-29 - Comments (0) - API

When creating users (agents or regular users) as well as organizations, you can set contact data in their profiles. For example, contact data may include their WhatsApp username, personal website URL, or address. When creating users (people) and organizations you can pass an additional "contact_data" property that allows you to attach one or more pieces of contact information.

Contact Data

Contact Data Type	Туре	Required Fields
Address	address	address (string) city (string) state (string) zip (string)
Website	website	url (string)
Instant Message (IM)	incrant maccada	service: (choice: whatsapp, aim, msn, icq, skype, gtalk, other) username (string)
Twitter		username (string) display_feed (boolean)
LinkedIn	linked_in	url (string)
Facebook	facebook	url (string)
Apple	apply	username (string)
Trust Pilot	trust_pilot	username (string)
Instagram	iingragram	username (string) instagram_id (string)

Example Request

Below is an example request showing all contact data objects populated. Note that these are optional, so you can just add one of these objects if you like. each property of the "contact_data" object is the "type" of the contact data object as shown in the table above.

```
POST https://my-helpdesk.deskpro.com/api/v2/people
Content-Type: applciation/json
Authorization: key <your_api_key>
