

Deskpro Horizon Release 2023.25

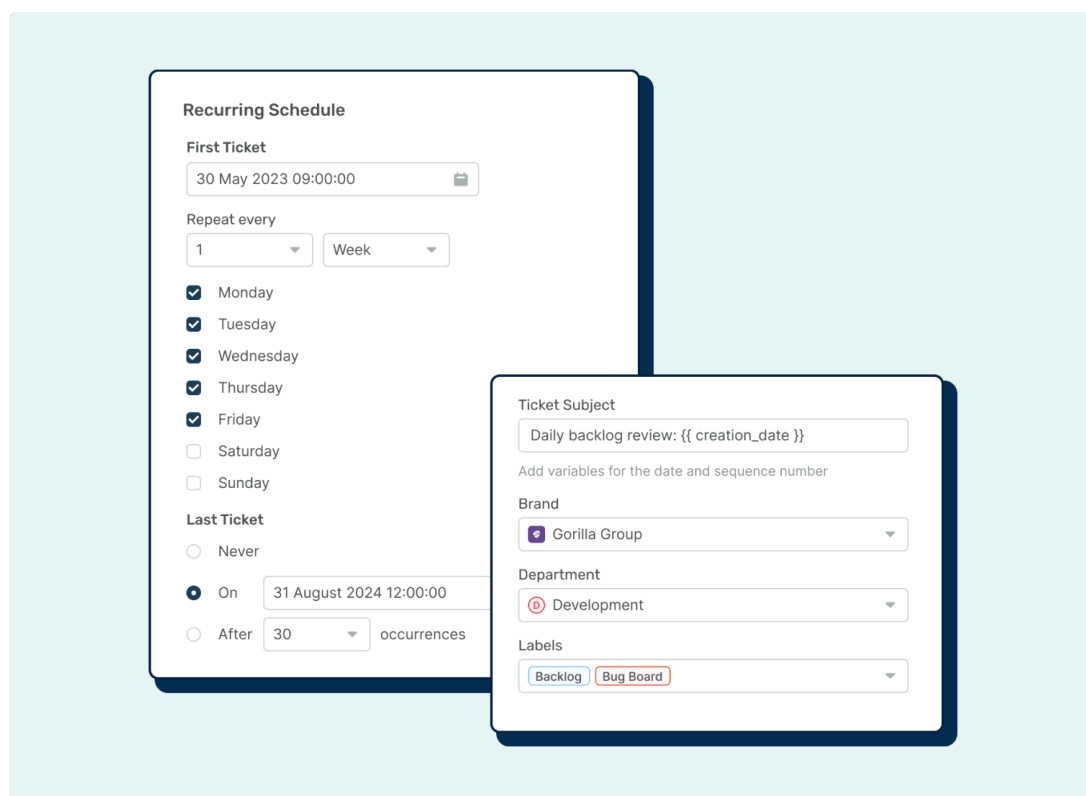

2023-06-20 - Lara Proud - Comments (0) - Deskpro Releases

We're pleased to announce the release of Deskpro Horizon, version 2023.25.2. This release includes several new features our team has been developing including recurring tickets, which let Admins create tickets that repeat on a regular schedule. We've also made some improvements to product functionality and several bug fixes.

New Features

[Schedule Recurring Tickets to automate repetitive processes](#)

The new Recurring Tickets feature makes it easy for tickets to be created on a regular schedule, auto-filled with key properties and fields to provide all the context agents need when working on repetitive processes (SC 112397).

The image shows two overlapping configuration windows from the Deskpro Horizon interface. The background window is titled "Recurring Schedule" and contains the following fields:

- First Ticket:** A date and time picker set to "30 May 2023 09:00:00".
- Repeat every:** A dropdown menu set to "1" and a unit selector set to "Week".
- Days of the week:** Checkboxes for Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, and Sunday. Monday through Friday are checked.
- Last Ticket:** Radio buttons for "Never", "On", and "After". The "On" option is selected, with a date and time picker set to "31 August 2024 12:00:00".
- After:** Radio buttons for "After" (selected) and "occurrences", with a dropdown menu set to "30".

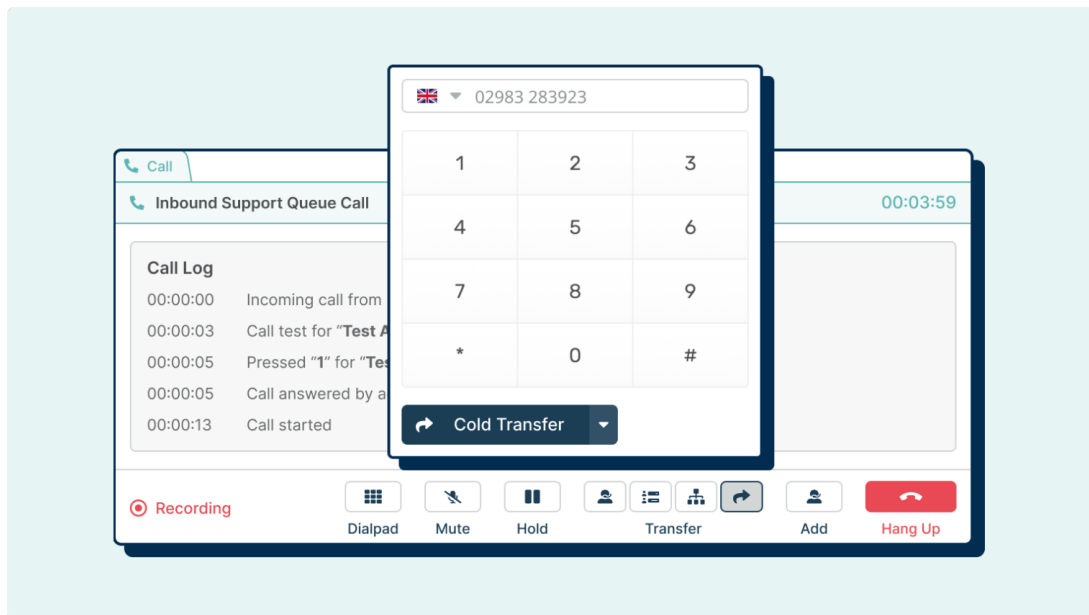

The foreground window is titled "Ticket Subject" and contains the following fields:

- Ticket Subject:** A text input field containing "Daily backlog review: {{ creation_date }}".
- Add variables for the date and sequence number:** A label for the variable placeholders in the subject line.
- Brand:** A dropdown menu set to "Gorilla Group".
- Department:** A dropdown menu set to "Development".
- Labels:** A dropdown menu with "Backlog" and "Bug Board" selected.

Staying on top of frequent tasks and business processes is now easier than ever with this new functionality that takes the manual work out of scheduled operations.

☐ [Transfer calls to external sources with the new transfer feature](#)

An agent can now transfer calls externally if you have outbound calling enabled (SC 114006).

☐ We have added a button to refresh your Twilio configuration in the Admin interface to ensure that URLs work if a domain is changed (SC 72474).

☐ Added status indicators to the Global Search, it will show when the search index is being repopulated, has fallen behind, or is offline (SC 90120).

Latest Improvements

☐ We have improved the behavior of URLs after tickets have been merged to ensure it is easy to locate the newly merged ticket when accessing via the merged ticket's URL. This means anyone accessing the ticket unaware it was merged will be redirected to the correct place (SC 104763).

Bug Fixes

☐ Fixed an issue with the Add CCs to Ticket setting where the number of CCs added to a ticket could be greater than the limit (SC 102701).

☐ Fixed a bug where phone numbers would be invalid when creating a new User in the CRM component (SC 91392).

☐ Fixed a bug to enable Agents with adequate permissions to create labels across the different Help Center content types (SC 95723).

☐ Fixed an issue where an error would display when attempting to listen back to Voicemails (SC 106417).

☐ Fixed an issue with Global Search, now when you paste content into the search field any trailing spaces will be removed so that the search can match results (SC 112162).

- Removed the option Ignore Timezone option for Custom Date Fields for items in the helpdesk, so when an item is accessed in different timezones the date will not change based on it (SC 111273).
- Deleting a ticket charge will now be shown in the Ticket History (SC 101900).
- Restored the ability to Group Ticket Queues by Status & Sub-Status (SC 104105).
- Fixed a bug where files with a restricted file type as part of their name were not able to be uploaded (SC 97283).
- Fix an issue where accessing the Ticket Preview menu in the Ticket and CRM interface would cause it to flicker when hovering (SC 112596 & 113108).
- Fixed an issue where Global Search would only show a max of 10 results for Users and Organizations (SC 111940).
- Fixed not being able to search by attachment names on Global and Ticket search and you can now filter based on the file extension (SC 105817).
- Fixed an issue where using the Run Now option on a Macro would remove images from Snippets (SC 102559).
- Adding a new user as a CC in tickets from the Help Center will no longer add them to tickets if registration is disabled (SC 107804).
- Fixed an issue where older messages would sometimes display in the Ticket Preview menu (SC 113793 & 112704).
- Fixed an issue where tickets were automatically archiving even when the rule was set to none (SC 113250).
- Fixed an issue on Firefox where Workspaces menus would close prematurely (SC 114404).
- We have removed the option of the login button on the Help Center if registration is disabled (SC 107774).
- Fixed an issue where Department Chat Permissions couldn't be disabled (SC 112376).
- Fixed an issue where the quick access Help Center links were not visible at the bottom of the Navigation Panel in the Help Center component (SC 114660).

Patch Release 2023.25.2

- We have released a fix for the issue where the Navigation Panel would get stuck open when collapsed and navigating to a Ticket Queue (SC 115255).

On-Premise Controller Release 2.6.2

We are also delighted to announce the latest version of the OPC, 2.6.2. This version

includes improvements and bug fixes that will improve the experience of using the OPC as a sysadmin.

Improvements

- Optimize MySQL vars during install based on available memory of the system (SC 114499).

Bug fixes

- Require uploads to be completed before enabling the import button (SC 114125).
