## New Feature: More Control Over Agent Notifications

2014-08-28 - Ben Henley - [Comments \(0\)](#) - [Product](#)

Want to make sure that agents don't miss important tickets?

As an admin, you can change an agent's notification settings - but so can the agent. If you're troubled by agents turning off important notifications (or turning on everything and then complaining of email overload) you'll be pleased to hear we've added a new permission setting.

The screenshot shows a settings panel with two tabs: "Email Notifications" (active) and "Browser Alerts". A checkbox labeled "Do not allow this agent to change these notification settings" is checked. Below this, there are three columns of notification types: "New Ticket", "Assignment", and "User Message". Under the "New Ticket" column, there is a row labeled "My Tickets" with a green toggle switch turned on. Under the "Assignment" column, there are two green toggle switches, both turned on. Under the "User Message" column, there is a grey toggle switch turned off and a green toggle switch turned on.

You can disable an agent's ability to change their notification settings from their profile in **Admin > Agents**, under the **Ticket Notifications** tab.

If you want to give your agents a break from notifications, you can also now disable them altogether from **Admin > Agents > Settings**.

The screenshot shows a settings panel titled "Agents Notifications". There is a checkbox labeled "Disable all notifications" which is currently unchecked.
